

Grade: 60/100

Feedback:

- You have made several syntax errors in your code, such as using ``int. Vacation;`` instead of ``int Vacation;``, missing semicolons, and incorrect variable casing (``vacation`` instead of ``Vacation``). These errors cost you marks.
- You correctly identified the condition ``years >= 11`` and assigned ``Vacation = 3``, earning you 2 marks for correct reasoning and output.
- However, you missed handling the case for years between 1 and 5 and also did not include a condition for years between 6 and 10. This oversight cost you marks.
- Remember to pay attention to syntax, variable naming, and logical conditions in your code to avoid losing marks in future assignments.
